

ABSTRACT OF THE DISCLOSURE

In an optical pickup of the invention, the center
of a laser beam incident on a dichroic prism can easily
correspond to the center of an objective lens by a heat
5 sink, which is held by a boss portion inserted into a
through hole provided in an optical base and a boss
plate having a plane portion in which the boss portion
can be moved in the through hole in a direction
orthogonal to an axis line of the boss portion.
